

ZHI Network **WHITEPAPER** THE MOST ENERGY EFFICIENT

Smart Energy : **Energy to Earn (E2E)**
Blockchain : **BSC**
Mintable : **15 seconds**
Receive : **ZHI Token**

A blockchain-based **Play-to-Earn (P2E) Token**
with an **energy-saving concept** using the
Proof-of-Burn (PoB) method.
Starting from **Zero Supply**
and can only be produced by buying **Zhi Energy**.

ABSTRACT

Zhi energy is not token, Zhi itself (BEP20), Zhi energy is used to mine zhi token (BEP20) through renewable energy processes. Each energy owner can receive zhi every 15 seconds forever.

Energy can also be traded in Zhi Marketplace.

Energy is energy to earn is commonly known as E2E. Where users can mining to get reward for zhi token.

Energy is a conceptual idea turned into reality by a group of cryptoinvestors. They believe that everyone should be able to get to crypto in the most pleasing and simplest way. Despite the cryptocurrency trade, not everyone is educated and furnished with the knowledge of trade. Therefore, there are many beginners and people without knowledge who try to learn and make money in the crypto room.

The idea behind energy is to ensure that anyone from anywhere in the world with minimum funds, can earn and make a profit through an E2E platform. The main emphasis on the project is - low investments with maximum profits.

With a burning desire to help and educate users all over the world, energy has taken its place in the crypto room to provide for a better source of income and to become a trendsetter in the E2E category.

When you buy and hold Zhi energy, this will allow you to:

Be a part of future mining and enjoy the rewards of mining zhi tokens without hassles. Zhi energy is designed to use renewable energy power to mine 24/7 ZHI token and become neutral carbon.

FOREWORD

Cryptocurrency has remained a disruptive technology since entering the world in 2009 and has shaped the way many things are done in many sectors around the world. Bitcoin is the world's most popular cryptocurrency and needs coin mining.

Cryptocurrency mining has always been beneficial but comes with an inherent challenge including energy consumption and endangers the carbon footprint of the cryptocurrency mine.

Elon Musk, CEO of Tesla, surprised the cryptocurrency market when he tweeted in May 2021 about his company no longer accepting Bitcoin for the purchase of vehicles. Musk attributed the decision to use coal and other fossil fuels to generate electricity for the cryptocurrency mine. It causes the Bitcoin value to drop before the announcement.

The concern about energy consumption when mining cryptocurrency has interrupted popular COINS like Bitcoin, Ethereum, and Dogecoin. These concerns come from an operation Bitcoin mining rig operating 24 hours a day, which statistically spends more power than the entire country of Argentina. It does not take into account the negative effects of carbon and excess waste that continue to increase the climate crisis.

In April 2021, when the Bitcoin hit an all-time high of \$64,000, the waste of energy was enough to power the entire state of Georgia, The United States, according to data from the University of Cambridge Alternative Financial Centre.

Zhi Energy's Mining System.

- Zhi Energy will reward all the energy owners mined to their host in the form of Zhi token. The first stage of the prize will last 365 days since the Zhi Energy first launched on December 3, 2021, or at the maximum limit of the Zhi 1 million tokens.
- Zhi Energy gives gifts based on the amount of energy each address has without being affected by how much Zhi Energy sold.
- Zhi Energy is the power source for Zhi tokens (such as the Bitcoin miners) in which the decisions of the energy owners will determine the amount of Zhi tokens to be in existence, so in the beginning we will only limit the maximum of 1 million Zhi tokens we will be able to vote on the people of Zhi Energy to decide if enough is enough.
- Zhi Energy that we stopped can be revived by the decisions of the energy owners (this is done to stabilize Zhi tokens circulation and Zhi tokens use).
- An arrangement is there on Zhi Energy:
 - A. Runs and offpowers Zhi Energy
 - B. Raise and lower Zhi tokens' gift
 - C. Halving (reducing the rate of new Zhi's)
 - D. Burning Zhi token
 - E. Transfer energy to other users
- Zhi Energy is built using smart contract systems like automatically arranged controllers to do everything.

Starting With Zhi Energy.

Zhi energy is (E2E) built over the BSC network for one solid reason - cheaper gas costs. This is the main value that we want all investors to understand because we want to be in business for a long time and we want to help and guide as many investors, new and experienced, to be able to participate in our project.

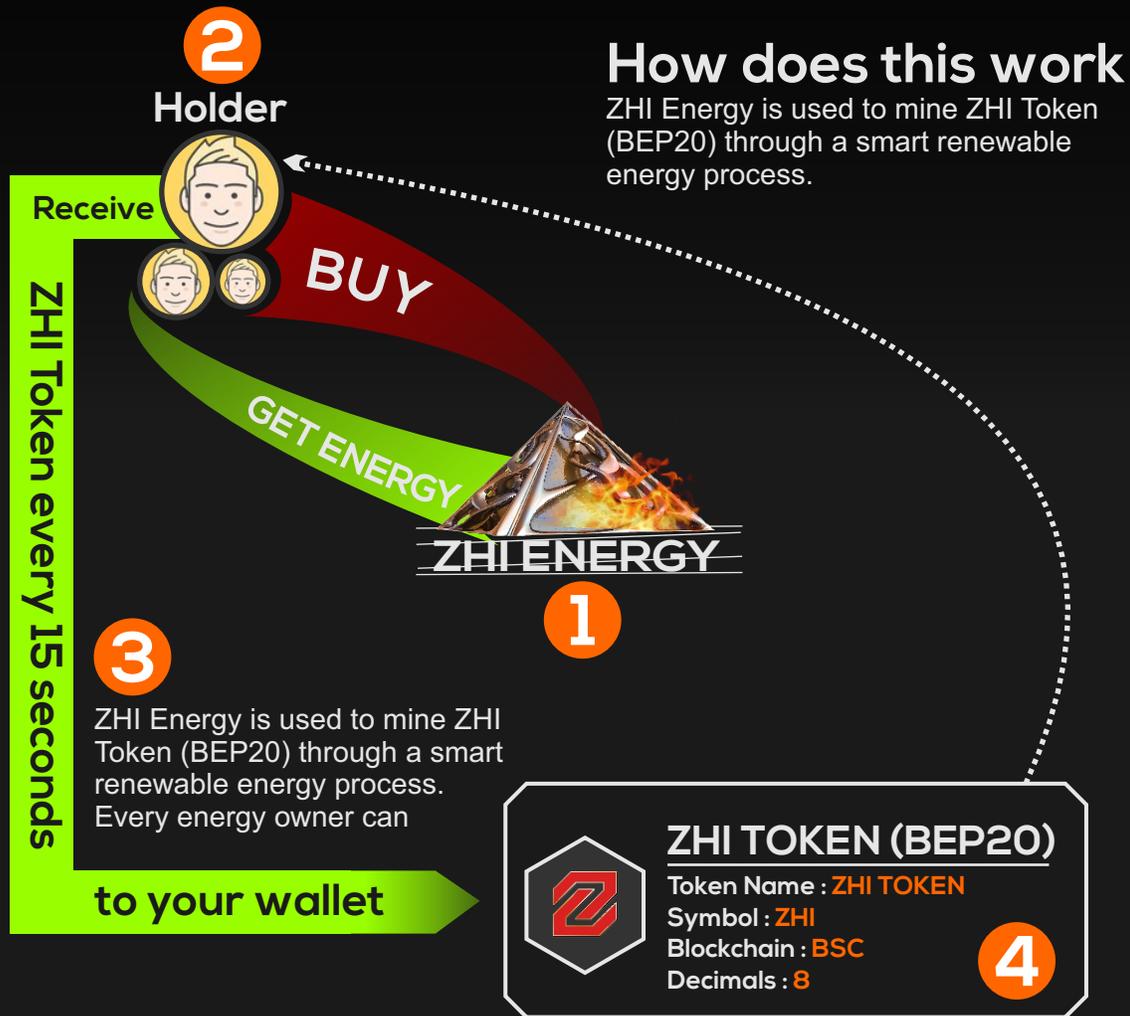

As a crypto development team, we want to support that zhi energy entirely is 100% decentralized.

We've seen most of the cryptocurrency project present with most of them promising "moon ". The biggest problem is they're less transparent, no explanation how they have actual utility, have insane taxes on every transaction, escape with the results when faced with challenges, and sometimes don't even start the project after getting the money from investors. A very good example is all the meme COINS we've seen flooding the cryptocurrency community.

We're here to bring the cryptocurrency back to the base.

Energy for Ecosystem

Initial Zhi Token Created:

Zhi tokens are 100% created with Zero supply and the only token like this.

Look at the picture above:

1. Zhi energy is not Zhi token (BEP20)

Zhi Energy is used to mine Zhi tokens (BEP20) through a renewable energy process. Zhi energy is a resource for zhi tokens (like bitcoin miners)

2. The holder is you

The holder buys Zhi Energi and then processes your new smart contract instantly in the form of an electric energy generator zhi token.

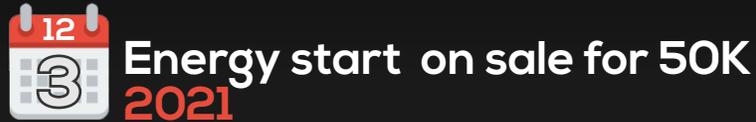

3. ZHI Energy is used to mine ZHI Token (BEP20) through a smart renewable energy process. Every energy owner can receive ZHI every 15 seconds

4. Blockchain-based Play-to-Earn (P2E) token with an energy-saving concept using the Proof-of-Burn (PoB) method. It starts from zero supply and can only be produced by purchasing Zhi Energy.

How much Zhi Energy is on sale ?

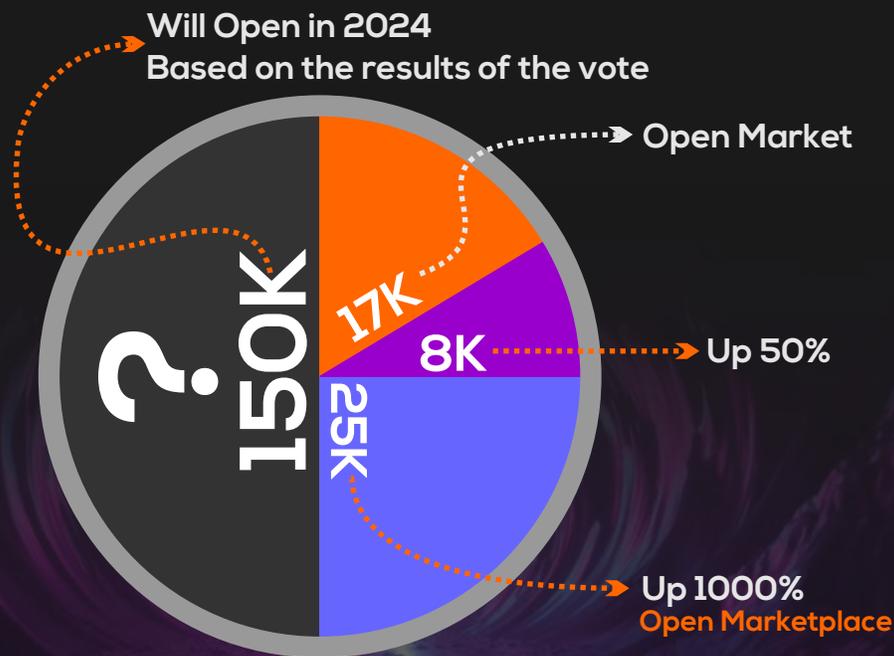

Zhi Energy will give gifts from all Mined Energy owners to their holders in the form of ZHI Tokens. The first stage of the reward will last for 365 days from the first zhi energy launch on December 3, 2021 or with a maximum supply of 1 million zhi tokens.

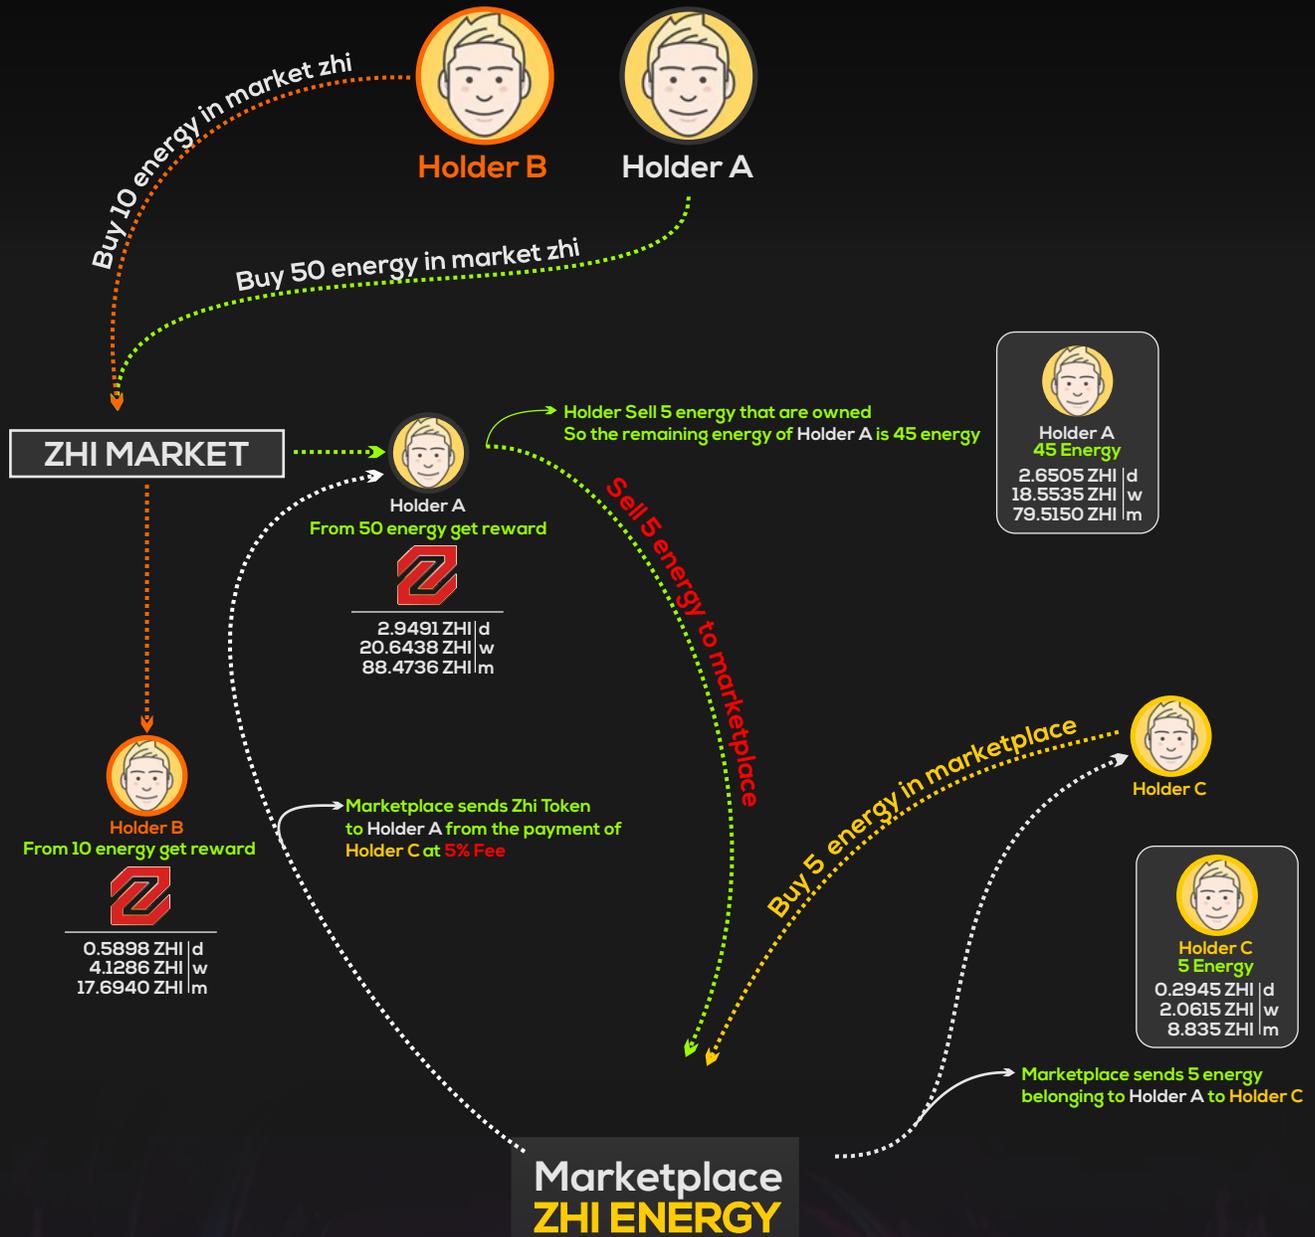

Energy is the power where zhi tokens can be created,
this is how we control the supply of zhi tokens

For the initial limit we will only sell as much as 25K and after 25K is reached we will increase the energy price so that the energy marketplace has a profit difference of around 50%-100%.

The Energy project has a 1-year roadmap with a 2-year plan of Dapps to be released. To top it all up there will be sub-projects that will be released within the ecosystem which has a minimum of 3 years lifecycle.

How does the zhi energy marketplace work

Description:

- The minimum energy that can be sold is 1 energy.
- Payments in the zhi marketplace only use zhi tokens.
- The energy in the market is in frozen assets that cannot generate zhi tokens.
- You can change the price at any time to match the current market price.
- The energy that's registered for sale on the marketplace can be canceled and it'll be yours again and it'll produce zhi tokens into your smart wallet.

Difference between **ZHI MARKET** and **ZHI MARKETPLACE**

- BNB and SATOZ payments.
- Energy is made using Smart Contracts.
- Increase the amount of circulating energy.
- No Transaction Fee.

- Payment using Zhi Token
- The energy that the Holder has.
- Does not increase the amount of circulating energy.
- 5% fee from every transaction

Token Name : **ZHI TOKEN**

Symbol : **ZHI**

Blockchain : **BSC**

Decimals : **8**

THE CONCEPT & IDEA

Zhi Token is the first platform in the world to start with Zero total supply.

Using blockchain, cryptography, and smart contracts, it seeks to increase trust between the transacting party by allowing transactions to be carried out on a transparent distributionLedger. Moreover, by integrating advanced technologies such as AI, Machine Learning, Augmented Reality, Geo-Location Tracking, Blockchain and Smart Contracts, Zhi Token offers financial instruments that have no analogues to date in the traditional finance world.

This white paper provides a detailed description of our research and planning. It also aims to demonstrate the current status and future plans of Zhi Token, related products and solutions, and ZHI tokens—financial instruments that act as digital parts of Zhi Token the underlying ecosystem and business. The document seeks to inform our readers about how we use the expertise of our team to provide eco-friendly cycles in a cost-effective manner, and with higher yields.

a decentralized world building platform that allows people to build, play and engage in a vast world with unlimited opportunities to create captivating experiences. At Zhi, users can purchase and collect exclusive NFTs not found elsewhere, and use them within the platform to trade, play games, and more.

Features

At Zhi, we believe in an open system of the future. To that end, we are building the infrastructure to make it easier for everyone to thrive and prosper in this borderless cryptoverse.

Ecosystem Platforms

Zhi creates an ecosystem where users, developers and brands can not only enjoy new social opportunities in the alternative metaverse, but also co-create a new space with unlimited commercial and economic potential. Users can enjoy a variety of features that promise a fun and dynamic journey.

Zhi will become one of the most valuable brands of the decade, as our virtual world strives to give users unprecedented freedom in exploring new frontiers, where users can use the latest technology to network, play and join the development of new markets with millions of other users.

Be part of the community that is building and creating the future of crypto.

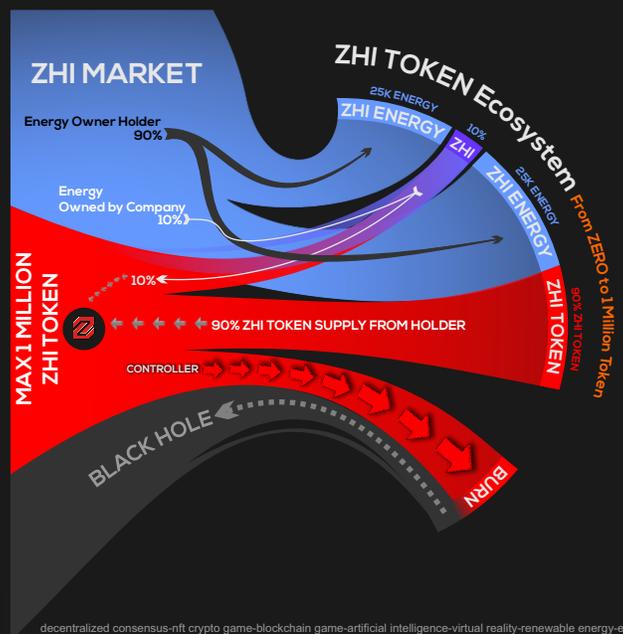

LEARN MORE & GET INVOLVED

A blockchain-based Play-to-Earn (P2E) token with an energy-saving concept using the Proof-of-Burn (PoB) method. Starting from zero supply and can only be produced by purchasing Zhi Energy.

The mission of the ZHI Tokens team is to build a system where content creators can create, play, share and trade without central control, enjoying secure copyright ownership with the ability to earn.

Here we aim to explain the tokenomic of the ZHI token, strictly detailing the maximum total supply, the role that ZHI holders should play in decentralized governance.

ZHI MARKET

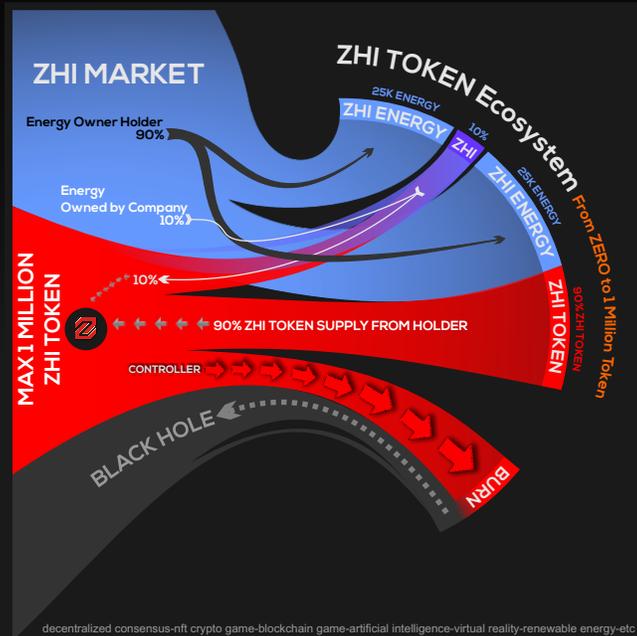

The place to buy zhi energy producing zhi tokens.

The maximum amount of zhi energy sold is 50 thousand energy and 10% is owned by the company, the remaining 90% will be sold to the public.

ZHI Energi is sold in 2 stages.

1. Energy presale 25k with a maximum price increase of 100% from the initial price.
2. Energy 25K next stage with price increase based on supply and demand, maximum 1000% price increase.

ZHI Token Ecosystem

Zhi tokens Start with Zero supply to 1 million tokens.

You as a zhi energy holder have a very important role in the distribution of zhi tokens to the public because 90% of zhi tokens come from energy owners.

1 Million ZHI Tokens

1 million tokens can be reached in the next 2 to 3 years with an estimated 50K energy sold in less than 6 months (this is our prediction).

Controller

It's a system we built in smart contracts to do its job of keeping zhi tokens circulating automatically.

Some tasks performed by controller

- Burn zhi tokens.
- Raise and lower zhi energy.
- Raise and lower zhi token reward.
- Halved (reduced new Zhi rate).
- Transfer energy to other users.

BLACK HOLE

We call it a black hole (0x000. . . 000) because the zhi tokens that we burn will not give a reward but disappear from circulation.

ROADMAP

To predict the future is impossible but with the roadmap in place, all investors are will be thrilled and amazed with the ecosystem that we are building for the community.

1

The Energy project has a 1-year roadmap with a 2-year plan of Dapps to be released. To top it all up there will be sub-projects that will be released within the ecosystem which has a minimum of 3 years lifecycle.

2

With the above statement, Zhi is looking for a minimum of 5 years to perfect his entire ecosystem and to ensure that all investors, who invest with us will get sustainable profits in a period of at least 5 years.

3

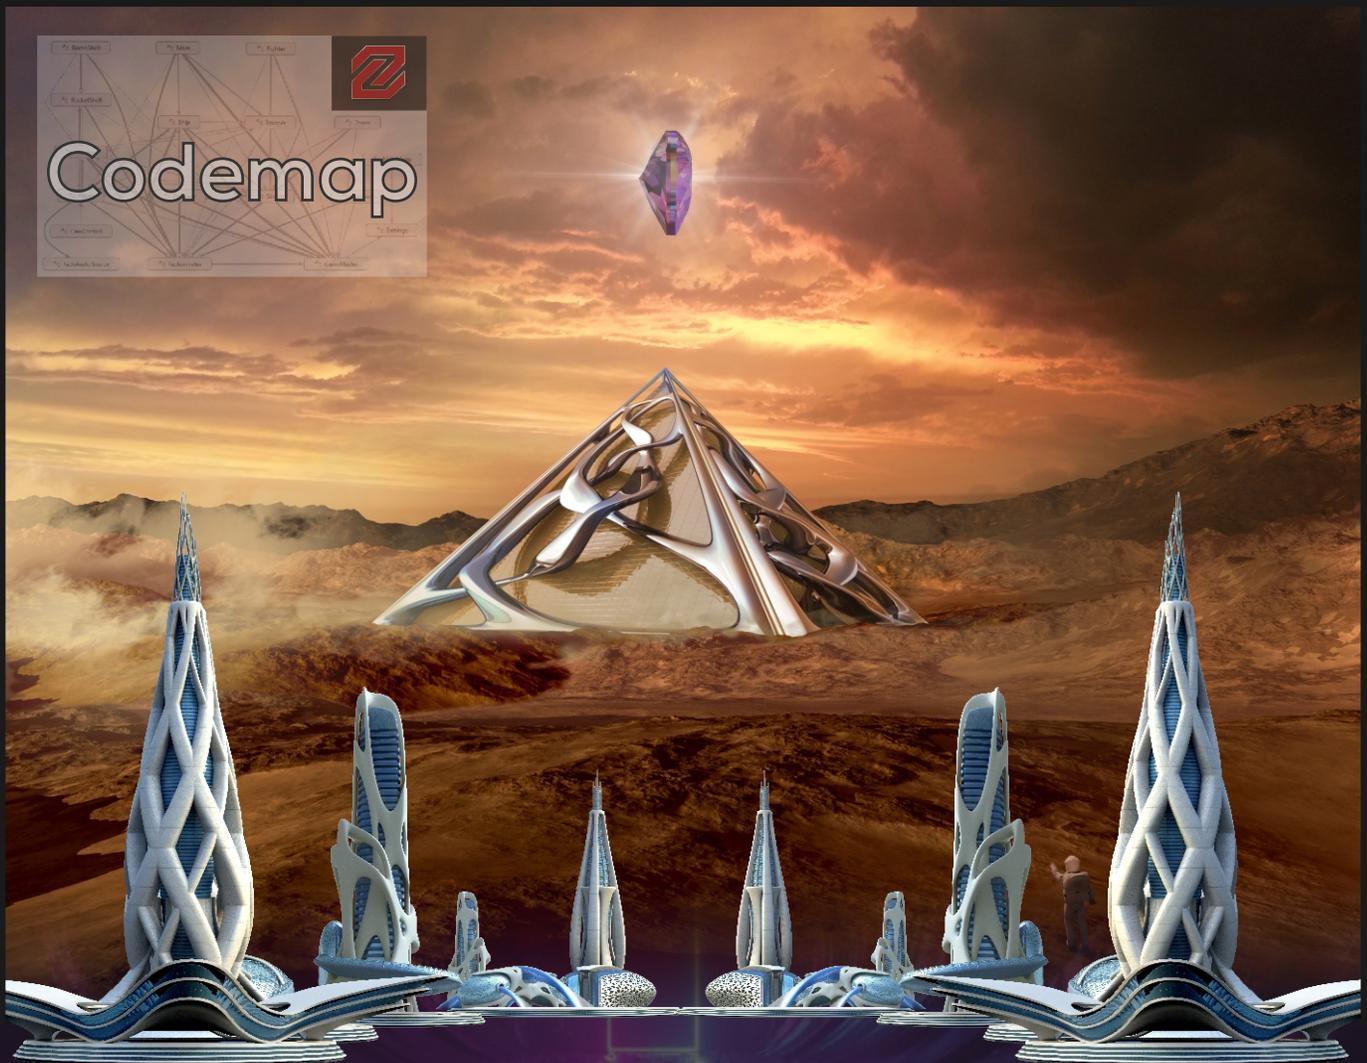

As technology improves with new developments in the crypto space, we will launch and provide better value to all investors which will then extend the life cycle to 10 years. The safety, trust, and loyalty of our investors are the top priority at Zhi Token.

WHAT IS ZHI WARGAME?

ZHI aims to build a long-term, stable, and ever-evolving game environment and token economy. Our game is multi-creation Medieval Metaverse Sci-Fi blockchain without boundaries and boundaries where developers, investors and all players can contribute together to create additional layers, features, modes and content, and explore the endless possibilities of human imagination

Zhi is where the best players are constant battle for resources, territories and world domination. Each player will be unique opportunity to protect its territory and gain tremendous rewards in the process. Only the strongest will crown the leaderboard. ZHI is currently in development for PC with cross-platform multiplayer.

General Terms & Condition

1. Please read all documents which are Companion Documents as specified in Terms & Conditions carefully before participating in this Token Sale. Note that the Terms & Conditions contain a binding arbitration clause and a class action waiver, which, if applicable to you, affect your legal rights. If you do not agree to these terms of sale, please do not visit the Website and UseToken in any way and also do not participate in the Token Sale.
2. Tokens are not financial instruments or securities. This is proprietary software made for the participatory access to other websites and platforms within the Zhi Network ecosystem and certain other restricted rights as specified in this document or the Companion Document.
3. Tokens are issued at the Project's sole discretion upon submission of the terms payment, completion of identification procedures, submission of required documents and fulfillment of all requirements specified in all documents included in the "Agreement" as specified in Terms and conditions. Project may refuse to allocate or sell any Tokens even on fulfillment of all conditions without giving any reason.

Disclaimer

This section contains the legal disclaimer and the Terms and Conditions. The following terms and conditions ("Terms") govern the token sale of Zhi Network. For sales by the Project to you, and purchases by you from the Project, certain cryptocurrencies tokens that comply with and support the BEP20 Token Standard. By accepting these terms and purchasing tokens, you agree to be legally bound by these terms and you expressly acknowledge and represent that you have carefully reviewed these terms at them in their entirety and fully understand the content herein, including the risks, costs and benefits of token purchase. If you are in doubt about the action you should take, you should consult legal, financial, tax, or other professional counsel. If you do not agree to these terms, please do not accept these terms or proceed further for any token purchase.

 **ZHI NETWORK**

ZHI is a distributed platform for a shared virtual world that enables developers to build and monetize applications on it. Zhi Tokens will be used to purchase Avatars, NFTs, goods and services in the world. Zhi tokens will also be used to drive content creation and user adoption.
